

For women who are experiencing complex pregnancies, we provide a dedicated team of obstetric, maternal-fetal medicine, pediatric, genetic and neonatal specialists. We offer pre-conception counseling, 3-D and 4-D ultrasound, and first and second trimester screening techniques for high-risk patients. But of all the tools we have at our disposal to keep pregnant moms pregnant, the most important is the moms themselves. By keeping babies in the womb as long as possible, we are able to lower the risk of high-risk pregnancies and increase the

opportunity for successful deliveries. And, if needed, it's good to know we have a Level III neonatal intensive care unit right down the hall. These are just a few of the reasons why 7,700 babies are born here each year. To learn more about our approach to high-risk pregnancies, call us at 1-888-VIRTUA-3 or go to [virtua.org](http://virtua.org). Serving the entire Delaware Valley with 4 hospitals and 18 outpatient centers across South Jersey.
